

ROGER CLEVENGER

PRINCIPAL SITE RELIABILITY ENGINEER

PORTFOLIO

rclevenger-hm.github.io/portfolio

GITHUB

github.com/rclevenger-hm

Principal-level SRE and DevOps engineer focused on reliable cloud infrastructure, observability, safe infrastructure change, incident response, distributed data platforms, and operational automation.

OPERATING PROFILE

AWS | OCI | Terraform | Kubernetes | Kafka | Hadoop | GitHub Actions | Jenkins | Docker | Ansible | Datadog | Grafana | CloudWatch

SELECTED EXPERIENCE

Oracle

MOST RECENT

Principal Site Reliability Engineer

Reliability and operations for cloud and distributed data infrastructure. Focused on observable systems, safe change, incident response, automation, Kafka, Hadoop, AWS, OCI, and Terraform.

Happy Money

PRIOR

DevOps Engineer

AWS infrastructure, Terraform, containers, CI/CD, deployment automation, and production observability.

NextVR

PRIOR

DevOps Engineer

Infrastructure, build/release automation, and production delivery for a media technology environment.

Local Corporation

FOUNDATION

Software Quality Engineer

Software quality and test automation; built the debugging and systems-thinking foundation for later SRE work.

PUBLIC ENGINEERING EVIDENCE

OCI Ephemeral Resource Janitor

github.com/rclevenger-hm/oci-ephemeral-resource-janitor

Safe automation with explicit lifecycle ownership, dry-run defaults, protection policy, action caps, and a termination interlock.

Kafka on OCI

github.com/rclevenger-hm/kafka-oci-deployment

KRaft quorum, private networking, Terraform, capacity, observability, and recovery planning treated as one reliability envelope.

Identity Document Async Pipeline

github.com/rclevenger-hm/driver_license_authenticity_lambda

AWS Lambda, S3, SQS/DLQ, DynamoDB, API Gateway, and Terraform make asynchronous work and recovery explicit.

OCI Hadoop Job Automation

github.com/rclevenger-hm/oci-hadoop-job-automation

Host-key verification, bounded remote execution, failure propagation, and careful handling of uncertain state after timeouts.

ENGINEERING PRINCIPLES

Make failure legible. Bound the cost of being wrong. Design recovery with the system. Design for ownership transfer.

PUBLIC PORTFOLIO BOUNDARY

Employer-proprietary systems, customer details, internal metrics, confidential architecture, and private repository contents are intentionally excluded.
